**PRLAC Comments:**

- Ensure best use management practices are followed due to existence of Japanese Knotweed. As such, the Committee recommends the applicant not dig up Japanese Knotweed as this is one of the most common ways the invasive plant is spread. For reference see: <https://www.agriculture.nh.gov/publications-forms/documents/japanese-knotweed-bmps.pdf>
  - Recommend the use of wildlife friendly erosion control fabric and materials.
  - Reclamation seeding and plantings should use only native species and any reclamation should avoid bio-solid based products.
  - Given proximity to the river, the Committee recommends that if property owners choose to fertilize, that they only use low- or no-phosphorous slow-release organic fertilizer.
  - Within the area of native vegetation, vegetation shall be allowed to grow without cutting, limbing, trimming, pruning, mowing, or similar activities and only allow those as needed for renewal or to maintain/improve plant health.
- Shoreland Permit Application (RSA 483-B) NHDES File Number: 2023-03109. Subject Property: 37 Cove Street, Goffstown, Tax Map #21, Lot #62A. Construct a deck on the back of house facing the water.
