PRLAC Comments: The Committee had previously review this application at our [Feb 20, 2024 meeting](#) (2024-00253) and submits the same comments with on addition

- o Exercise utmost care when installing and maintaining erosion control and cofferdam devices to prevent any silt or turbidity from entering or affecting the river.
- o Ensure best use management practices are followed due to existence of Japanese Knotweed. As such, the Committee recommends the applicant not dig up Japanese Knotweed as this is one of the most common ways the invasive plant is spread. For reference see:
<https://www.agriculture.nh.gov/publicationsforms/documents/japanese-knotweed-bmps.pdf>
- o Recommend the use of wildlife friendly erosion control fabric and materials.
- o Reclamation seeding and plantings should use only native species and any reclamation should avoid bio-solid based products.
- o Given proximity to the river, the Committee recommends that if property owners choose to fertilize, that they only use low- or no-phosphorous slow-release organic fertilizer.
- o Within the area of native vegetation, vegetation shall be allowed to grow without cutting, limbing, trimming, pruning, mowing, or similar activities and only allow those as needed for renewal or to maintain/improve plant health.
